

TraceCrop: Innovation Proposal

1. THEME / SECTOR

Agriculture Technology (AgriTech), Supply Chain Management, Logistics, and Food Safety.

2. UNIQUENESS / NEWNESS OF INNOVATION

TraceCrop provides real-time neural-driven data fusion and immutable tracking using a decentralized cloud infrastructure. Unlike traditional paper-based or siloed digital systems, it features role-based interactive dashboards for farmers, distributors, retailers, and consumers to ensure absolute transparency and prevent data manipulation.

3. CONCEPT AND OBJECTIVE

Concept: An unbroken, verifiable chain of custody for agricultural products from farm to table.

Objective: To eliminate blind spots in the supply chain, reduce food spoilage, ensure fair compensation for producers, and provide end-consumers with transparent, scannable insights regarding the origin and journey of their food.

4. POTENTIAL AREAS OF APPLICATION IN INDUSTRY / MARKET

- Agricultural cooperatives and farming networks.
- Food processing and packaging companies.
- Grocery retail chains and supermarkets.
- Export/Import logistics and cross-border trade.
- Pharmaceutical and cold-chain logistics.

5. MARKET POTENTIAL OF IDEA / INNOVATION

The global supply chain transparency market is expanding rapidly due to increasing regulatory requirements and consumer demand for ethical sourcing. TraceCrop can be monetized via a SaaS licensing model for enterprise clients, alongside transaction-based fees for mid-market logistics providers. The scalable architecture allows for rapid deployment across emerging markets.
